

ART OF SCIENCE 11 ELEMENTAL

The IGB's Art of Science program is a celebration of the common ground between science and art. The works in this installation were created by pairing IGB scientists and their research images with current IGB artist Julia Pollack. These pieces are the result of conversations between the scientists and artist, an abstract visual exploration to highlight the power and aesthetics of science imagery.

This year's art exhibit will be presented outside and socially distant at the University of Illinois Arboretum. Please wear a mask covering your mouth and nose, and maintain a six feet or one and a half meters distance between people. Parking is available at 1800 South Lincoln Avenue in the lots near the Noel Welcome Garden, and along South Lincoln Avenue. Additional parking is available in the lot north of Japan House.
